<i>Nirada Siriyakorn, Somchai Insiripong</i>			
36 Hemophagocytic lymphohistiocytosis and acute kidney injury with severe nephrotic syndrome in dengue patients: a case report	283		
<i>Pongpratch Puapatanakul, Nattachai Srisawat</i>			

Preface

Dengue is the most common mosquito-borne viral disease in the world. The World Health Organization has announced a global strategy of prevention and control of dengue during 2012-2020 aiming reduction of dengue mortality by 50% and morbidity by 25%. Five technical elements to be applied are: diagnosis and case management, integrated surveillance and outbreak preparation, sustainable vector control, future vaccine implementation, and basic operational and implementation research.

The Textbook of Dengue consists of altogether 8 sections and 40 chapters. The updated and relevant topics are comprised of the epidemiology, pathogenesis, diagnosis, management, and prevention and control of dengue infection. The Practical Guidelines for Management of Dengue in Adults from the Royal College Physician of Thailand has also been added in the Annex. We intend that the Textbook of Dengue would be a reference for physicians and scientists who are interested in dengue to provide an enriching guide to help implement effective strategies in Dengue.
